

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### A. Conclusion

After conducted the research and analyzed the result, the researcher concludes that the previous condition of students before taught by using guiding questions technique is not really satisfied. It can be shown from the mean score of pre-test is 57. On the other hand, the students show their good improvement with the mean score of post-test is 72. Then, after treated by guiding questions technique in the teaching and learning process, the students got the improvement with the improvement level is categorized in medium level. It showed from the N-Gain score 0,34 means that the improvement is not really low also not really high. Moreover, guiding questions technique also gave a good effect for students enthusiasm in writing.

#### B. Suggestion

Referring to the findings of this research, suggestions can be showed related to the research findings and discussion as follows:

- a) Guiding questions technique might be applied for other kinds of text beside recount text. This technique also can be applied to the senior high school or university level.
- b) The form of questions tested to the students can be varied not only for asking to make a text but also kinds of questioner form or interview.
- c) Other kinds of research method beside quantitative research also proposed to do this technique applied in qualitative or mix method.

Those are the conclusion of the research findings and suggestions for teachers also futher researchers who want to try guiding questions technique as a technique in teaching and learning process that aim to increase students' enthusiasm in writing. Finally,the researcher also encourage to implement this technique at various schools and texts in order to achieve different results.
