

ABSTRACT

Hamdan, Daud. 2020 The Correlation between EFL Students Listening Effort and Their Fatigue: A Case Study at SMP 8 Bandung. A Paper. English Education Department, Faculty of Tarbiyah and Teacher Training, UIN Sunan Gunung Djati Bandung.

The purpose of this research is to find the correlation between student's listening effort and fatigue. The targets examined in this study are junior high school students in grade 2 with a total capacity of 29 students. The development of research in this field is still infrequent for sources. Also, review the subject in deeper research fields, which is very limited with the type of listening being studied. Theories-based and previous research are taken and adjusted to the needs of this research from other previous and based study. The biggest hope of this research result is that Research, systems, and listening facilities on English subject matter can be improved to the next level. Considering that listening is the first basic to learn English became fluently. According to some listening theories, the method used was quantitative methods with system correlation on this research opportunity. Using stratified data sampling, self-report and questionnaire on data retrieval, talking about problems in listening, several things cause it such as gaps, hearing loss, Fatigue, effortful, multi-tasking, etc.. Still, in the results, The biggest obstacle to generating great effort is in human cognitive capacity, after observing and analyzing the data respondents the researcher finds that fatigue is not a big impact caused effortful in listening.

Keywords: Listening Effort, Listening-related fatigue, Self-report
