**Role of *Skeletonema costatum* Diatom Extract as an
Epithelial Tumor Inhibitor Agent in Doxorubicin-
induced Fruit Flies**

Mohamad Agus Salim

**Biology Department - Fac. Science &
Technology - UINSGD Bandung**

Bandung, June 16th 2020

Epitelial tumor = skin Tumor

Skeletonema costatum

Doxorubicin

Doxorubicin has cytotoxic side effects that affect DNA directly.

Significant according to the Mann-Whitney U-test. Significance level $\alpha = 0.05$. *The value is significantly different from the negative control (5% ethanol, $P < 0.05$). **The value is significantly different from the positive control (0.4 mM, $P < 0.05$).

Conclusion

We conclude that diatom extract did not show any carcinogenic activity. Meanwhile there was tumor reduction in *Drosophila melanogaster* epithelial cells, we suggest that further studies should be conducted to evaluate the antitumoral activity of diatom extract and its chemical derivatives.
