Kata Kunci : *fatherless, psychological well-being, remaja akhir.*

Abstract

This research is about the impact of the fatherless phenomenon on psychological well-being in late adolescents. This study aims to find out how the impact of the fatherless phenomenon on psychological well-being in late adolescents is described. The research method used is qualitative with a phenomenological approach. The focus of the research is related to describing the impact of the fatherless phenomenon on psychological well-being in late adolescents. There were three informants taken based on purposive sampling technique. The data collection method uses semi-structured interviews, unstructured observation, and documentation. Interview transcripts were analyzed using interpretative phenomenological analysis (IPA) data analysis techniques. Based on the results of data analysis, thirty superordinate themes were found in six aspects of psychological well-being. Through this research, informants as teenagers in the final phase conveyed their personal experiences that each had their own uniqueness in living life without a father figure for a very long time.

Keywords : *fatherless, psychological well-being, late adolescent.*
